

## BUTTERFLY VALVES FOR OIL FILLED ELECTRICAL TRANSFORMERS

### **General specifications**

These valves are especially designed to be mounted upon oil filled electrical transformers.

In the following pages we submit to your attention technical drawings concerning our standard types of butterfly valves.

On request we can manufacture special butterfly valves, based on customer's drawings, or design special ones, according to characteristics required by user.

Standard material for our butterfly valves is carbon steel. On request valves can be protected with a galvanic treatment (zinc plating) or, in case of use in corrosive environments, can be manufactured in stainless steel, bronze ...

Each valve is supplied with 2 packings to assure oil tightness. In case of special employ (ASKAREL instead of mineral oil, low storage temperatures, etc...), please, point out packings material required (special rubber, viton, silicone rubber, ...)

To consent the operator to know if the valve is open or closed, a suitable arrow is located on the operating nut.
